New toys for Christmas..

Dear <<First Name>>

We're all very excited here at The Frazer Company for two reasons:

One is that this is our first newsletter, secondly, we've just ordered a new piece of kit.

It's a **Trotec SP400** laser cutter and engraver. Have a look at the video below to see it in action.

The Trotec SP400 - coming to the Frazer Co soon!

As you may or may not know Trotec are recognised as being the best on the market, made in Austria (not the Far East, like the vast majority on the market), and who happen to have a support centre very close to us at Yate in Bristol.

It should arrive just after Christmas

While we've always been able to rotary engrave on our great big Multicam CNC router (even 3D engraving) we've sometimes felt that we'd like to do more intricate stuff.

This new machine will enable us to engrave some very fine detail on all sorts of materials, including acrylic , glass, laminates, leather, metals, paper, other plastics, stone, textiles and wood.

We will also be able to cut acrylic, laminates, leather, paper, other plastics, textiles and wood.

This machine also has the neat trick of "passthrough" which will allow us to work on items that would normally be too big for the bed (give us a call to discuss the possibilities).

We've already got some interesting stuff lined up, so watch this space for videos of the first projects.

In case I don't get the chance to speak to you beforehand, can I take this opportunity to wish you and yours a very happy and Merry Christmas.

PS Please let me know by clicking the unsubscribe link below if you don't want to hear any more from me about this or any other

exciting projects in the future.

All the best

Steve
